

Monitoring of pesticide residues in food

Documentation of the data model

Date: 03.07.2026

The Federal Food Safety and Veterinary Office (FSVO) analyses plant protection product residues in Swiss food every year. To this end, samples of plant-based and, in some cases, animal-based food products collected from the market are analysed for residues. The results provide information on the situation in Switzerland and show how frequently residues are detected and whether the legal maximum levels are complied with. The dashboard presents the results clearly by product group and food product over several years.

To promote transparency and data reuse, the FSVO also publishes the underlying data as Open Government Data (OGD). This document describes the data models and structure of the published datasets.

Attribute	Explanation	Example data
sampleID	Unique identifier assigned to the sampled food product. One sample can have multiple laboratory tests.	107-2021-00052443
testID	Unique identifier for a specific test result within a sample. Typically combines the sample ID and a test sequence number.	107-2021-00052443_4
sampleDate	Date on which the sample was collected.	2021-07-19
sampleMaterial	Name of the sampled food commodity or product.	Aprikosen
originCountry	Country of origin of the sampled product, usually represented by an ISO country code.	CHE
testCode	Internal laboratory or monitoring-program code identifying the analytical method or test performed.	SP931
assessment	Assessment or compliance status of the test result (e.g., compliant/non-compliant), if available.	NaN
parameterName	Name of the analyzed substance, residue, contaminant, or parameter.	Spirotetramat-enolglucoside
testValue	Measured concentration or value of the analyzed parameter.	0.092
testUnit	Unit in which the test result is reported.	mg/kg
referenceValueRHG	Reference value or regulatory maximum residue level (RHG = Rückstandshöchstgehalt), if available.	NaN
analysisYear	Year in which the analysis was performed or reported.	2021
sampleNumber	Additional sample number or laboratory reference number, if assigned.	NaN
productionMethod	Production method of the product (e.g., conventional, organic), if available.	NaN
foodEx2Code	FoodEx2 classification code used for standardized food categorization in food safety monitoring.	242020
sampleGroup	Higher-level food category to which the sample belongs.	Früchte
